

The same tracking capability can be provided on GPS capable mobile

The Alert-iT Track-iT is a simple and affordable personal tracking device. It is used in conjunction with a computer console to show the clients position in real time and to the accuracy of 4 metres. The console also allows the definition of safe or danger areas such that an alarm is raised if the client crosses the boundary. The notification can be sent by email, SMS Text or direct to the Alert-iT Care Pager that is used within the care facility for other monitoring.

The Track-iT also features a “panic” button to phone a pre-set number and has two way speech with “listen-in” capability.

The small, discrete tracking unit continuously updates our secure web based system with the latest position

The supervisor can see position, history and set safety boundaries for the user

Alarm is triggered if the client crosses the boundary

Alarm notification direct to Alert-it Pager at Care Home or via Text/Email to Cellphone
