ALARM  
DETECTOR

Secure-it monitoring systems are available in two packages depending on individual need. Both are easy to install and simple and secure to operate. Alarms are transmitted through a failsafe radio link to an advanced pager which comes as standard. The pager has a 450m range.

**A** A unique personal alarm badge which can detect falling, hyperthermia risk, panic or the user wandering too far from the pager.

DOOR DETECTOR

**B** The second package consists of three devices (two door monitors and a motion detector).

### Door Detector

It consists of two door switches that raise an alarm if the front or back door is activated. Ideal for domestic situations or care homes and can include emergency doors. The secure device has a staff reset button for their own entry and exit.

MOTION DETECTOR

The device also includes a HELP button for assistance and can detect potential hypothermia or fire in the area by ambient temperature monitoring.

### Motion Detector

A portable battery powered motion detector for use at night to detect bed vacation, or by day to detect room exit or entry, for example a kitchen. Ideal for domestic situations or care homes where up to 32 users can be protected.

ADVANCED  
RADIO PAGER

All systems come with an advanced radio pager. The pager distinguishes between the different severities of each alarm and is powered by rechargeable batteries. For professional use a 32 channel revision is available.

For further information or to order the right system, please call us on **0845 217 9952**, or visit our website at [www.alert-it.co.uk](http://www.alert-it.co.uk)
