ALARM DETECTOR

DOOR DETECTOR

MOTION DETECTOR

ADVANCED RADIO PAGER

Secure-it monitoring systems offer a range of support for carers depending on individual need. They are easy to install and simple and secure to operate. Alarms are transmitted through a failsafe radio link to an Advanced Radio Pager or to an existing call system.

Alarm Detector

A unique Personal Alarm Badge which can detect falling, hyperthermia risk, panic or the user wandering too far from the Pager.

Door Detector

Door switches that raise an alarm if the monitored door is opened. These are ideal for domestic situations, or care homes and can include emergency doors. The secure device has a staff reset button for their own entry and exit.

The device also includes a HELP button for assistance and can detect potential hypothermia or fire in the area by ambient temperature monitoring.

Motion Detector

A discreet detection unit with an infra red motion detector remote from the bed. The alarm is raised as soon as the users foot descends to the floor. The same sensor can be positioned to detect them sitting up, leaving a room, or entering a dangerous area. It can also detect door usage, where a door may be left open and replacing door mats which can be a trip hazard.

Advanced Radio Pager

The Advanced Radio Pager distinguishes between the different severities of each alarm and is powered by rechargeable batteries. For professional use a 32 channel revision is available. The pager has a 450m range.

We are the foremost supplier of Plesiocare Systems.
